

Summary

International Forum and Exhibition "Accurate measurements – the basis of quality and safety" (MetrolExpo-2021)

The forum-exhibition MetrolExpo 2021 was held in Moscow, Russian Federation, from October 18 to 20.

BSUIR took part in the work of the collective stand of scientific and technical developments of the Ministry of Education and presented high-tech microwave devices, scientific and technical services in the field of calibration and testing of millimeter wavelength equipment.

During the exhibition, negotiations were held with representatives of Russian and foreign enterprises on the possibility of expanding the range of microwave equipment for further delivery to customers in the Russian Federation and abroad. Advertising information about the scientific and innovative activities of BSUIR was distributed to the exhibition visitors and specialists.

Also, a representative of MWMLab took part in the section "Metrological support, measuring instruments and professional competencies - the basis for ensuring the quality of mechanical engineering products" of the scientific and practical conference "Metrology as a support factor for key industries. Digital transformation of metrology", held within the framework of this exhibition, and presented a report on the topic "Radio measuring equipment of the millimeter wavelength range".
