

Summary

XXVI International Specialized Exhibition “Energy. Ecology. Energy Saving. Electro – 2022”

At the XXVI International Specialized Exhibition “Energy. Ecology. Energy Saving. Electro – 2022” the Belarusian State University of Informatics and Radioelectronics introduced new materials for absorbing electromagnetic radiation in the microwave range, technologies to produce new functional materials that could be used in the energy and automotive industries, and pipeline damage controller.

The developments, presented at the exhibition, received recognition from the companies such as: Belarusneft-Promservis, Rechitsaneft Oil and Gas Production Department, ItalPlanTek LLC, Promenergo LLC, Noviterbel Company, Energy Supply Systems LLC, and Alterf Bel LLC. In the course of the exhibition, the talks on the possibility of implementing the presented technologies in the production of the mentioned companies were conducted. Contact information was exchanged with all interested people and company representatives in order to establish further cooperation. Based on the results of the exhibition BSUIR was awarded a diploma.
