## **BSUIR R&D Department celebrated its 35<sup>th</sup> anniversary**

On November 3, in BSUIR, the research and development team celebrated 35 years since the day when the Research and Development Department was created. At the meeting of the Scientific and Technical Council gathered not only the top management of the Research and Development Department and young researchers but the scientists who were at the origin of this department also.

BSUIR Rector Vadim Bogush expressed his well wishes to the R&D Department team on the occasion of the anniversary: *"35 years, from the perspective of a human, can be considered young, but in science, moreover in electronics industry, it is at least 5 generations of technologies that have dramatically changed the world. Many changes are awaiting us in the future. I wish you to overcome these changes altogether, feeling the support of the older generation, audacity, and openness of youth ideas."*

Vice-Rector for R&D Viktor Stempitsky expressed his warm words of gratitude as well: *"R&D is always about success, achievements, and recognition. This is the brand of the University, which largely determines what BSUIR is. And this brand is created thanks to a united team that combines youth and experience, which sets goals and achieves them. My wish to all is to have patience and motivation to develop, create and make scientific discoveries."*

The ex-heads of the R&D Department were invited to the event. Among them there were Doctor of Technical Sciences, Professor Valentin Muravyov (worked in this position from 1987 to 2004), Alexander Kuznetsov, and Anatoly Osipov. Academician, Doctor of Technical Sciences, Professor Vladimir Labunov expressed his well wishes to the colleagues, too.
