BSUIR developments were presented at the Science Festival

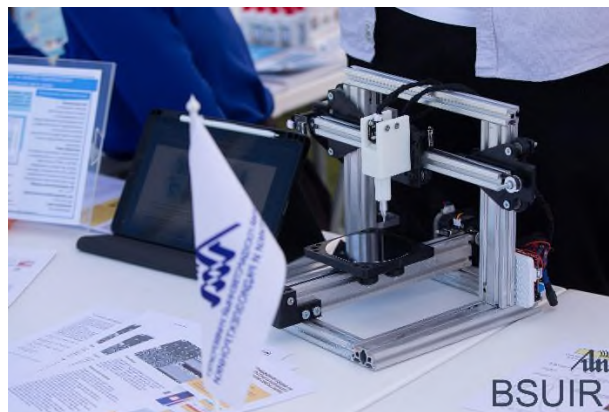

September 7, 2024

Botanical Garden

Belarus, Minsk

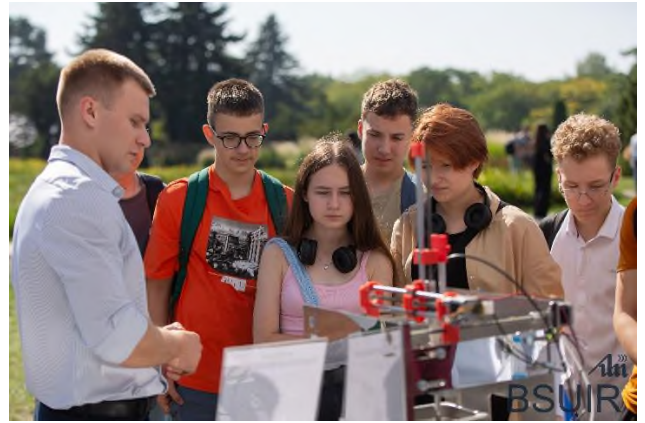

On September 7, a large-scale science festival was held in the Botanical Garden. At the exhibition more than 145 practice-oriented innovative projects from various fields of science were presented. Among them were developments by BSUIR students.

For the whole day, the Central Botanical Garden turned into a large interactive laboratory. The festival delighted all inquisitive guests with its fascinating lectures, exciting experiments and master classes.

BSUIR was represented at two festival venues. In the "University of the Future" zone, guests could get acquainted with the works of our students and students of the Minsk Radio Engineering College, see real retro computers at the "Radio Nostalgia" exposition of the BSUIR Institute of Information Technologies. Young and inquisitive festival participants could try themselves in interactive tests and quizzes of the "Pedagogical Student Lounge" project of the BSUIR Department of Information Radio Technologies.

At the "100 Innovations of Young Scientists" platform, BSUIR presented three developments by talented university scientists and a joint project of BSUIR and the Minsk Research Institute of Radiomaterials.

The innovations of BSUIR, presented at the festival, were also highlighted by the Minister of Education Andrei Ivanets.

The sixth science festival was held under the status of "international". In this regard, BSUIR did not lag behind. The International Sector of the University Student Council took an active part in the work of the festival.
